DETAILED ACTION

Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Art Unit: 2623

1. The disclosure is objected to because of the following informalities: see page 4, paragraph 2, line 2, typos with respect to the translation from German to English.

Appropriate correction is required.

2. Claim 1 is objected to because of the following informalities: line 4, typos with respect to the translation from German to English. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 13, 15, 21 and 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 13 and 15 recites the limitation "the edge extraction" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claims 21 and 23 are dependent on claims 13 and 15 respectively and therefore, are rejected also.

Art Unit: 2623

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1, 2, 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Face recognition using the HAVNET neural network, by Altaf et al (SPIE Vol. 2492/873-883).

With respect to claim 1, Altaf discloses a face recognition system in that a binarized image is compared to the face model (see figure 1 object learning and object recognition) face model is subject to the multiple two dimensional transform, (see figure 1, edge detection edge enhancement), and the comparison is done on the basis of the Hausdorff spacing, (see page 875, section 3 the HAVENET i.e. Hausdorff distance as a metric of similarity is employed for the purpose of recognition) as claimed. However, he fails to disclose the dot group of the image, as claimed. But, mentioned on page 874 section 2.1 the image acquisition is done by a camera that produces 640x480 pixels this is obvious to one ordinary skilled in the art at the time of invention to simply use the pixel image as the "dot image" as claimed. This modification produces a method and apparatus to be use in the face recognition to simply find a face in an image.

Art Unit: 2623

With respect to claim 2, he further discloses binarized image is derived from the original image by means of edge extraction, (see section 2.2 page 874) as claimed.

With respect to claims 25-27, he further discloses, the measure of the Hausdorff on the basis of the average value of a certain percentage the percentage is between 0 and 100, Hausdorff measure on the basis of the dots, and calculating the Hausdorff, (see page 877 section 3.3 and the percentage between 0 and 100 covers all the values therefore any value between that is OK and the reference states that some distance is measured therefore 0 to 100 is covered) as claimed.

Allowable Subject Matter

7. Claims 9-12, 14, 16-20, 22 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Furthermore, claims 13, 15, 21 and 23 will be allowed once the rejection under 35 USC 112 as set above is also overcome.
